

# CRICUT DESIGN SPACE COMBINE FUNCTION EXAMPLES

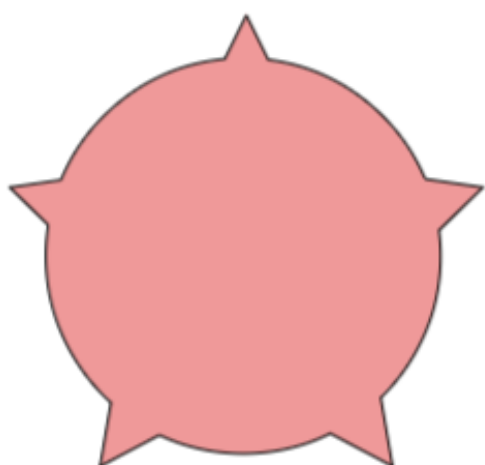

**START WITH  
OVERLAPPING  
ELEMENTS OR SHAPES  
LIKE THIS CIRCLE AND  
STAR**

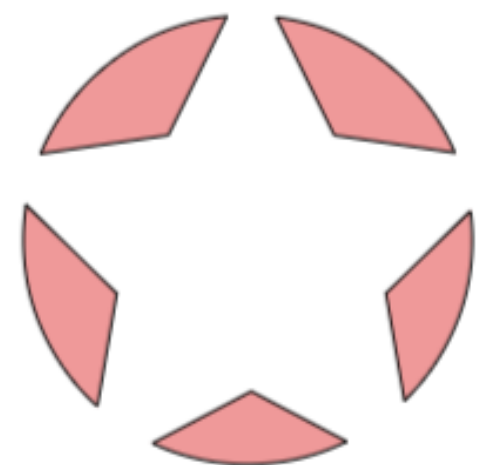

## **WELD**

This does same thing it has always done. It joins things that are touching. Great for script fonts.

## **UNITE**

Results look like Weld, but you can use the Undo United button even after saving your project.

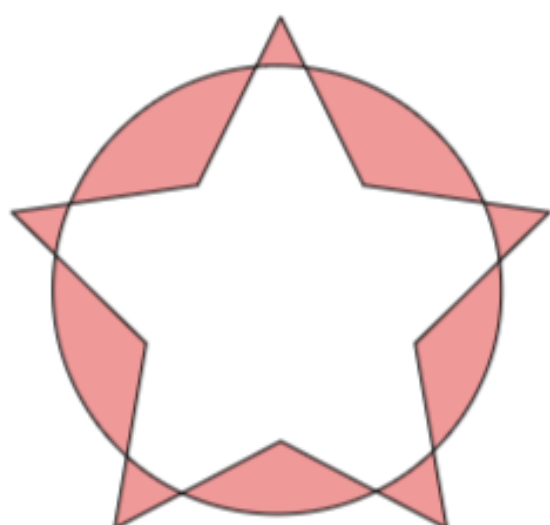

## **SUBTRACT**

Similar to slice, it will cut or remove one item from the other, but subtract also removes the original item for you.

## **INTERSECT**

Intersect will leave only the parts of the design that intersect or overlap.

## **EXCLUDE**

Exclude is the opposite of intersect and will remove only the parts that overlap.
